

Unit 3 Video Worksheet 6
Interferon's Anti Viral Activity

1. What happens when a host cell is infected with a virus? Name of molecule?
2. After this newly form molecule is secreted from the host cell, what cell type will it bind to?
3. Can the original host cell infected by the virus save itself?
4. What benefit will cells gain if they have this “newly secreted molecule” attached to their plasma membrane?
